

STERMAN.[®]

Vision
Mission Statement

Rev 2024

Our Mission

From complex storage technology in modern wind turbines to carbon-ceramic brakes for supercars. From high-performance hybrids to efficient electric motors for EVs. In a wide range of applications, you'll find key components crafted on STERMAN systems.

We are among the leaders in quality and technology for custom clamping solutions, equipping numerous renowned global companies with precise, efficient, and smart production solutions. Our core expertise lies in the design, development, and manufacturing of custom clamping systems tailored to the unique geometry of our clients' workpieces, especially when standard market solutions don't meet the required accuracy or processing needs.

Our greatest strength is the trust placed in us by our customers and partners, our employees, our suppliers, and the public. Our commitment to innovation, trustworthiness, reliability, ethical standards, and legal and legitimate principles is the foundation of our actions.

At the heart of our family business, now in its third generation, is a continuous focus on innovation.

- Innovation and ambition
- Partnership and respect
- Family and responsible business

These values unite us through their constant practice and implementation.

Driven by our Black Forest roots, we always aim to align our actions with nature and humanity. Every business decision is evaluated and considered from a sustainability perspective.

Our goal? To create and build the best clamping technology.

For us, the best clamping technology means tailoring it to our customers' applications to achieve the highest quality, ensuring efficiency throughout its lifecycle, and guaranteeing reliability and durability.
